

IN THE SPECIFICATION

Please amend the specification as follows.

The paragraph beginning at page 2, line 10:

*al* ~~Fig. 3D~~ Fig. 1D is a cross-sectional view of yet another door mechanism including a beveled cover 118 disposed in a beveled opening 120 in a housing 122. This design also requires that the hinge 124 be mounted forward of the front plane of housing 122. Otherwise, if door 118 is hinged at a location 126 within opening 120, beveled edge 128 of door 118 will jam against the beveled edge of opening 120. Further, it is difficult to mount and/or conceal a hinge at the thin beveled edge of cover 118.
